Contents:

INTRODUCTION

The Python Performance Analyses Recipes are a set of notebooks illustrating the use of different tools and methods for performance measurement and analysis of applications.

1.1 Motivation

Many tools provide a diverse set of measurement and analysis capabilities, creating a hard-to-navigate landscape of choices.

1.2 Limitations

This is not intended as a coherent or comprehensive set of materials, just some recipes that have worked for the authors in the past.

INDICES AND TABLES

- `genindex`
- `modindex`
- `search`
